Matched Cartesian oval: $n_1 = 1$, $n_2 = 1.5$, $z_0 = -10$, $z_i = 6$, NA=0.8002
Same aperture and source normalization; numerical experiments only, no repository changes
Transverse magnitude agrees
Legacy Debye helper
Modern surface radiation
$|E_x|/\max|E_x^{\mathrm{modern}}|$
x/λ_0
Longitudinal phase has opposite sign
Legacy helper
Modern / old Green integral
Imaginary E_z, same phase reference
x/λ_0
Separate sign error from Debye limit
Unchanged legacy helper
Reverse helper E_z (diagnostic)
Relative complex vector-field difference
z_i/λ_0
